

HCAHPS

Active Interactive Voice Response Script (English)

Overview

This active interactive voice response (IVR) interview script is provided to assist operators while attempting to reach the patient. The script explains the purpose of the survey and confirms necessary information about the patient before the patient is connected to the IVR system. Operators must not conduct the survey with a proxy.

Note: No proxy respondents are permitted in the administration of the HCAHPS Survey. However, an individual may assist the patient by repeating questions-- but only the patient may provide answers to the survey.

General Interviewing Conventions and Instructions

- The IVR introduction script must be read verbatim
- It is optional to include the day of the week, e.g., Monday, with the discharge date (mm/dd/yyyy)
- All text that appears in lowercase letters must be read out loud
- Text in UPPERCASE letters must not be read out loud
- All questions and all answer categories must be read exactly as they are worded
 - During the course of the survey, the use of **neutral** acknowledgment words such as the following is permitted:
 - Thank you
 - Alright
 - Okay
 - I understand, or I see
 - Yes, Ma'am
 - Yes, Sir
- Read the scripts from the interviewer screens (reciting the survey from memory can lead to unnecessary errors and missed updates to the scripts)
- Adjust the pace of the HCAHPS Survey interview to be conducive to the needs of the respondent
- No changes are permitted to the order of the question and answer categories for the Core and “About You” HCAHPS questions
- The Core HCAHPS questions (Questions 1-22) must remain together
- The seven “About You” HCAHPS questions must remain together
- All transitional phrases must be read
- Text that is underlined must be emphasized
- Characters in < > must not be read
- [Square brackets] are used to show programming instructions that must not actually appear on IVR screens
- Only one language (i.e., English or Spanish) must appear on the electronic interviewing system screen

- Each question must be programmed so that the patient can go to the next question in cases where they do not know the answer or refuse to answer
- Each question must have the option for the respondent to be connected to a live operator at any time during the survey
- MISSING/DON'T KNOW (DK) is a valid response option for each item in the IVR script; however, this option must not be read out loud to the patient. MISSING/DK response options allow the IVR system to go to the next question if a patient is unable to provide a response for a given question (or refuses to provide a response). In the survey file layouts, a value of MISSING/DK is coded as "M - Missing/Don't know."
- Skip patterns should be programmed into the IVR system
 - Appropriately skipped questions should be coded as "8 - Not applicable." For example, if a patient answers "No" to Question 10 of the HCAHPS Survey, the program should skip Question 11, and go to Question 12. Question 11 must then be coded as "8 - Not applicable." Coding may be done automatically by the IVR system or later during data preparation.
 - When a response to a screener question is not obtained, the screener question and any questions in the skip pattern should be coded as "M - Missing/Don't know." For example, if the patient does not provide an answer to Question 10 of the HCAHPS Survey, then the IVR system should be programmed to skip Question 11, and go to Question 12. Question 11 must then be coded as "M - Missing/Don't know." Coding may be done automatically by the IVR system or later during data preparation.

NOTE: SEE INTERVIEWING GUIDELINES IN APPENDIX M FOR GUIDELINES ON HOW TO HANDLE DIFFICULT TO REACH PATIENTS.
